Purpose

This document exists to verify that the build pipeline compiles Markdown deliverables to PDF with pandoc, alongside the LaTeX documents. It is a temporary artifact and is expected to be deleted once the pipeline is confirmed working.

Teams who prefer Markdown over LaTeX can write a deliverable this way: any `.md` file under `docs/` is compiled, except `README.md` and `Expectations*.md`, which belong to the course instructors.

Features exercised

The sections below deliberately use constructs that require LaTeX packages beyond the bare minimum, so that a missing package shows up as a failed build rather than a silently degraded document.

Tables

Pandoc renders these using `longtable` and `booktabs`.

Document type	Source extension	Compiler
LaTeX	<code>.tex</code>	pdflatex
Markdown	<code>.md</code>	pandoc

Mathematics

Inline math such as $O(n \log n)$, and a displayed equation requiring `amsmath`:

$$\sum_{i=1}^n i = \frac{n(n+1)}{2}$$

Code

```
def dependencies(document):  
    """Recorded from the .fls file pdflatex writes."""  
    return manifest[document]
```

Lists and quotes

1. Ordered item
2. Another item
 - A nested bullet
 - And one more

A block quote, to confirm the default template styles it.

Notes

If both `Foo.md` and `Foo.tex` exist in one folder, the Makefile lists the Markdown rule first, so Markdown wins.
